

F210502

I have completed all functionality and it should be working properly. The customer credit is adjusted in the UserAccounts.txt file so if you spend all the money you will have to manually top it up by editing the txt file. If you don't want to change the txt file and just adjust the credit within the same "session", remove lines 246-265 in CustomerFrame.java. I wasn't sure what was required from the brief.
